SWK PROPERTIES

Growth & Lead Engine Report

How SWK Properties generates, qualifies and routes its own organic leads from 622 cities into SWK OS, with five people, one agent and no scraping.

A Appendix: all cities

Every number in this report is computed from `data/cities.json` and the engine source at build time. Replace the worksheet with measured results; none are assumed.

01 Executive summary

SWK Properties will generate its own leads by earning attention in 622 cities with useful, local content and by making it effortless to opt in. Every lead is checked for consent, scored, routed to the right person and written into SWK OS with its channel, city and reasons attached.

622	115	66	5	16
cities	countries	content languages	access seats	weeks, 4 waves

What we decided

- **Consented capture, not scraping.** Public posts that state buying intent become a prompt for a person to reply publicly. Nobody is added to the CRM unless they enquired or opted in. This protects the Instagram, Facebook, WhatsApp and Google accounts the whole programme depends on, and keeps us inside UAE PDPL and the laws of each lead's country.
- **One engine, one source of truth.** Normalise, consent-gate, dedupe, score and route in a single tested pipeline (33 automated tests) that writes into SWK OS through a low-privilege key.
- **Five seats only**: Owner, Manager, BDM, IT Admin and one Agent, each with least-privilege permissions.
- **Volume from breadth.** Twelve content pillars in 66 languages across 622 cities, 18 opt-in doors, and speed to lead.
- **No promises we cannot source.** No guaranteed returns; ROI content is a worksheet that runs on the visitor's own numbers.

Three findings you should act on

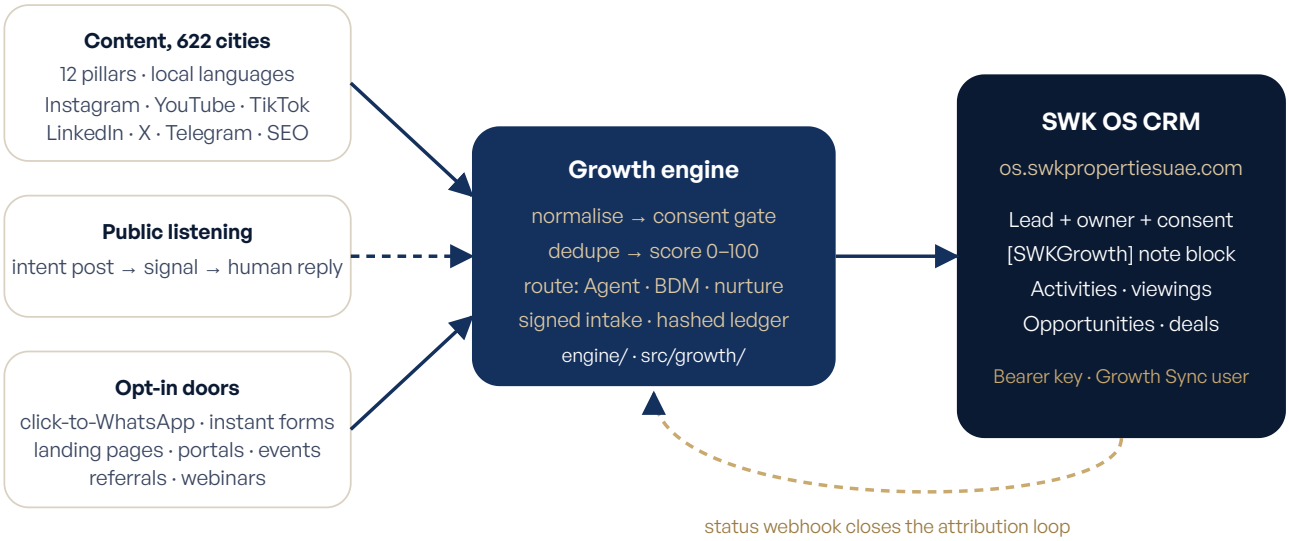

1. SWK OS privilege escalation. Any OS role with write access on the *admin* module can mint an API key that acts as the Admin user. We reproduced it on a local copy: a role with that access exported every lead. IT therefore gets read-only admin access and only the Owner creates keys.
2. The single agent cannot see only their own leads in OS. OS has no row-level scoping for staff; the Agent can list all CRM leads.
3. A 09:00–19:00 agent shift misses the enquiry window in most cities. 47 of 71 Tier 0/1 cities have no overlap; a 14:00–23:00 shift cuts that to 10.

02 Principles and boundaries

We do	We do not
Publish useful city-specific content and let people opt in	Scrape personal profiles, member lists or private messages
Listen to **public** posts with buying intent; a person replies publicly	Auto-DM or cold-call people who only posted publicly
Import exports where the person asked to be contacted	Buy or rent contact lists
Store consent wording, time and URL with every lead	Mark anyone “Opted in” without evidence
Use claims that carry a source and a date	Promise returns, prices or availability we cannot source

Scraping would breach platform terms (an account or ad-account ban ends the programme), collect personal data without a lawful basis, and produce leads who never asked to hear from us. The listening route gives visibility of intent without those costs.

03 System architecture

The listening path is dashed because it never creates a CRM lead on its own. A person replies publicly, and the lead enters through an opt-in door when the person chooses to.

04 Lead workflow

#	Stage	What happens	Owner	Target
1	Capture	Person enquires or opts in; consent text, time and URL stored	Automation	immediate
2	Normalise	Phone to E.164, e-mail check, city matched to the city list	Engine	seconds
3	Consent gate	No enquiry and no consent: signal only, never a CRM lead	Engine	seconds
4	Dedupe	Same phone or e-mail merges into the OS lead with a repeat-enquiry note	Engine	seconds
5	Score	0–100 with stored reasons. Hot ≥ 65, warm ≥ 35, nurture ≥ 10	Engine	seconds
6	Route	Hot/warm to Agent when on shift and under capacity, else BDM; budget ≥ AED 5,000,000 to BDM with Manager informed	Engine	seconds
7	First contact	Hot 5 min, warm 30 min, nurture next day	Agent / BDM	SLA
8	Qualify	Budget, timeline, purpose, cash or mortgage, decision makers	Agent / BDM	48 h
9	Viewing	In person or virtual; activity logged in OS	Agent	per lead
10	Offer to close	Opportunity, Form A/F, DLD steps in OS	Operations	per deal
11	Nurture / reactivate	Opted-in sequences; lost reason recorded	BDM	monthly

05 Lead sources: volume without scraping

Source	Mechanism	Basis	OS source
Click-to-WhatsApp	wa.me link with source code on every post, bio and QR; OS already auto-creates WhatsApp leads	Enquiry	WhatsApp
Comment-keyword opt-in	“Comment GUIDE”; official API sends the guide	Consent	Other
Meta instant forms	Webhook fetches the lead; consent checkbox mapped	Enquiry + consent	Other
City landing pages	Signed form endpoint, one per city and language	Enquiry	Website
ROI worksheet, payment-plan comparator	Gated by phone or e-mail; visitor's own numbers	Enquiry	Website
Launch watchlist	WhatsApp channel or e-mail, one message a month	Consent	WhatsApp / Email
Residency checklist	PDF behind a short form	Enquiry	Website

Source	Mechanism	Basis	OS source
Live Q&A and webinars	Registration per language cluster	Enquiry	Other
YouTube explainers	Pinned WhatsApp and form links, chapters	Enquiry	Other
LinkedIn events and forms	Tier 1 investor cities	Enquiry	LinkedIn
Public intent listening	Signal queue → public reply → opt-in link	None until opt-in	n/a
Portal enquiries	CSV import or e-mail parsing	Enquiry	Property Finder / Bayut / Dubizzle
Referral programme	Tracked code, Owner-approved reward policy	Consent	Referral
Exhibitions and roadshows	Badge-scan CSV with printed consent	Enquiry	Exhibition / event
Developer co-marketing	Joint launch pages and webinars	Enquiry	Other
Google Business Profile	Calls, messages, directions (UAE office)	Enquiry	Inbound call
Remarketing	Hashed e-mail audiences, consented lists only	Consent	n/a
Partner and agent networks	Written referral terms	Enquiry	Agent network

06 The 622-city programme

Generated from one seed file (`src/growth/city-seed.mjs`) into `data/cities.json`. Each city carries tier, rollout wave, IANA time zone, currency, content languages (regional where it matters, such as Malayalam for Kochi and Tamil for Chennai), a right-to-left flag and an organic channel stack for its market archetype.

Tier	Meaning	Cities
Tier 0	UAE home market	8
Tier 1	Planning priority: major investor hubs and large UAE-connected diaspora centres	63
Tier 2	All other cities on the list	551

Tier 1 is an assumption

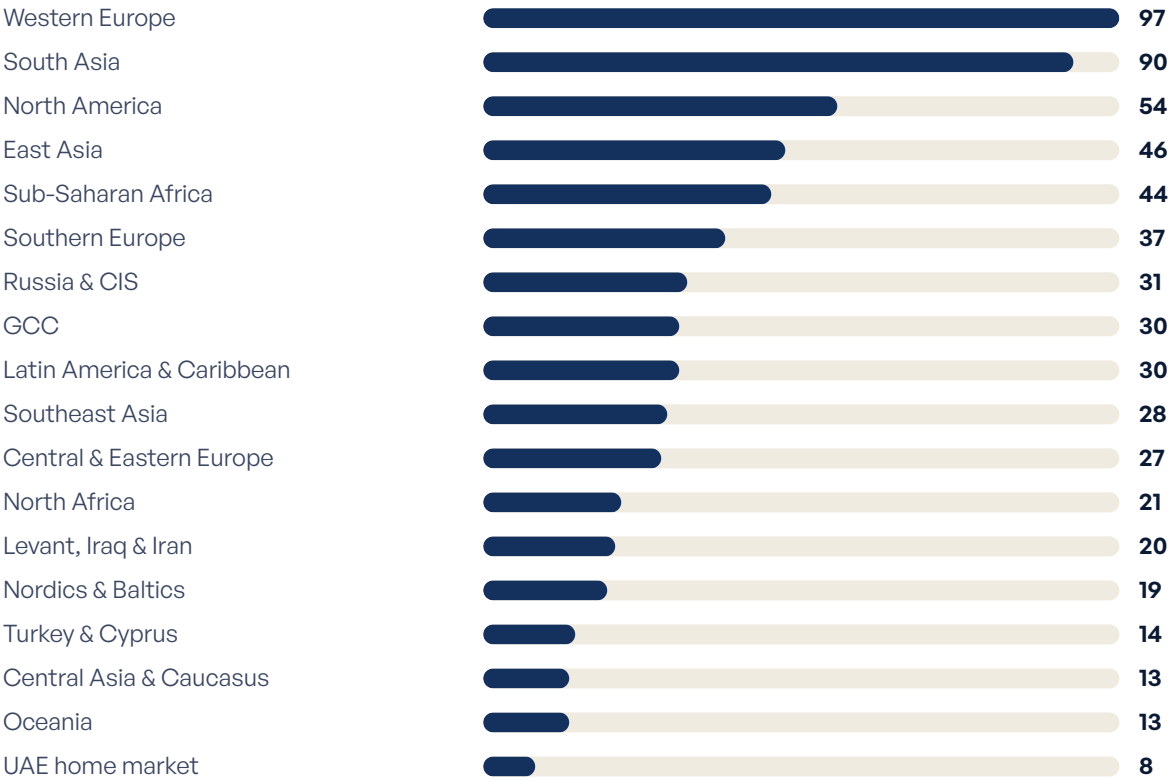

Tiers are a starting point, not a measurement. After 90 days every city is re-ranked on our own CRM data: leads, qualified rate and revenue per city.

Rollout waves

Wave	Weeks	Scope	Cities
0	always on	UAE cities	8

Wave	Weeks	Scope	Cities
1	1–4	All Tier 1 cities	63
2	5–8	Tier 2: South Asia, GCC, Levant/Iraq/Iran, North Africa, Turkey & Cyprus	150
3	9–12	Tier 2: Europe, Russia/CIS, Central Asia & Caucasus, Sub-Saharan Africa	245
4	13–16	Tier 2: East & Southeast Asia, North America, Latin America, Oceania	156

Cities by region

How 622 cities stay credible, not spam

1. Tier 0/1 cities get localised content on their own tag (for example `#KochiToDubai`): 3 posts a week on the primary channel plus a monthly live.
2. Tier 2 cities are served by **language-cluster** accounts plus a city page. A page must contain something genuinely local (currency framing, language, time-zone windows, real questions from enquiries). Pages that only swap the city name are not published.
3. Every brief is generated from data, then reviewed by a fluent human before use.
4. A city earns its own channel only when its results justify it at the 90-day review.

Market archetypes and starting channel stacks

Archetype	Channels (priority order)	Note
UAE home market	instagram → tiktok → youtube → linkedin → whatsapp → google_business	Residents, relocators and local investors. Highest speed-to-lead expectation.
GCC investors	instagram → snapchat → tiktok → x → youtube → whatsapp	Arabic-first creative, short drive/flight to Dubai, weekend viewing trips.

Archetype	Channels (priority order)	Note
Levant, Egypt, North Africa & Turkey	instagram → facebook → tiktok → youtube → whatsapp → telegram	Arabic/French/Turkish creative. Treat sanctions and source-of-funds screening as a gating step for relevant jurisdictions.
South Asia & diaspora	instagram → youtube → facebook → whatsapp → linkedin → x	Large relationship base with UAE. Regional-language reels, family and NRI-style decision journeys, WhatsApp-first follow-up.
Russia, CIS & Caucasus	telegram → youtube → vk → instagram → whatsapp	Russian-language creative. Some Western platforms are restricted in some markets; reach audiences via Telegram/YouTube and the diaspora abroad. Run sanctions and AML screening before any transaction.
Western Europe & Nordics	instagram → linkedin → youtube → facebook → x	Investor-led, due-diligence heavy. Lead with documentation, escrow protection and neutral figures; GDPR consent is mandatory.
Southern Europe & Cyprus	instagram → facebook → youtube → linkedin → whatsapp	Local-language creative; residency and lifestyle angles tested against compliance review.
Central & Eastern Europe, Baltics	facebook → instagram → youtube → linkedin → telegram	Local-language creative, price-sensitive, payment-plan led.
Sub-Saharan Africa	whatsapp → facebook → tiktok → instagram → youtube → x	Mobile-first and WhatsApp-heavy. Payment-plan clarity and cross-border transfer guidance matter more than glossy creative.
Mainland China	wechat → xiaohongshu → douyin → weibo	Most Western platforms are not accessible. Operate via an authorised local partner or China-resident staff; consider PIPL for any data collected.
Hong Kong, Taiwan, Japan, Korea	instagram → facebook → youtube → linkedin → whatsapp → line → kakaotalk	Local-language creative and local messaging apps (LINE in Japan, KakaoTalk in Korea).
Southeast Asia	facebook → tiktok → instagram → youtube → whatsapp → linkedin	Strong chinese-diaspora and Muslim-majority angles in some markets; creative in local language.
USA & Canada	instagram → youtube → linkedin → facebook → x → tiktok	Diaspora professionals and investors. Time-zone gap means scheduled posting and an evening-GST response window.
Latin America & Caribbean	instagram → whatsapp → facebook → youtube → tiktok	Spanish/Portuguese creative; WhatsApp is the default conversation channel.
Australia & New Zealand	instagram → facebook → linkedin → youtube	Expats and investors; large time-zone gap, so asynchronous nurture.

Channel availability changes by market (some Western platforms are restricted in Russia and mainland China). Confirm availability and legality before committing budget.

07 Content system

Twelve evergreen pillars, rendered per city with the city's language, currency and posting window. Hooks avoid return promises (a test fails the build if guarantee language appears).

Pillar	Format	Call to action
How buying in Dubai works from your city	carousel	Comment GUIDE for the your city buyer checklist
Off-plan payment plans explained	reel	Message us PLAN on WhatsApp for current plans
Your numbers, your ROI worksheet	interactive	Open the ROI worksheet and enter your own figures in your currency
Residency options — check the current rules	carousel	Comment VISA to get the eligibility checklist
Moving your currency to AED: questions for your bank	carousel	Save this list and ask your bank before you transfer
Meet a consultant who works with your country buyers	video	Book a 15-minute call
Community guide: where your city buyers look first	reel	Comment AREA for the community comparison
Plan a viewing trip from your city	carousel	Message us VIEW to plan a visit or a virtual viewing
Myths vs facts: escrow, RERA and your deposit	reel	Comment TRUST for the protections explained
Live Q&A for your city investors	live	Set a reminder and send your question in advance
New launch watchlist	story	Join the watchlist on WhatsApp (opt-in)
Rent vs buy: run it with your own inputs	carousel	Open the worksheet and compare

Rules

- **ROI is a worksheet.** Visitors enter price, rent and costs in their own currency; the output is arithmetic. No appreciation forecasts.
- **Facts need a source and a date** on the claims register. The property records in the repository are a snapshot, not live availability.
- **Every property ad carries the regulator's advertising permit number and QR code** (confirm the current format with RERA/DLD).
- **Native-language review** before publishing; right-to-left layout checked for Arabic, Persian and Urdu.
- **UTM convention:** `utm_source=<channel>&utm_medium=<organic|lead_ad|listing>&utm_campaign=<cityid>-<pillar>-<yyyymm>`

Weekly rhythm

Day	Work
Monday	Brief, approvals, claims check

Day	Work
Tue–Thu	Publish by wave and cluster; reply to signals
Friday	Live or Q&A; nurture sends (opted-in only)
Saturday	Review dashboard; plan next week

08 Scoring and routing

Signal	Points
Stated intent (viewing 20, call-back 15, prices 10, brochure 5, form 8; capped)	up to 40
Timeline (immediate 15, 1–3 months 12, 3–6 months 7, 6+ months 2)	up to 15
Budget (AED 2M+ 15, 1M+ 12, 680,000+ 8, any 3)	up to 15
Purpose and finance stated	up to 10
Contact quality (phone 5, e-mail 3, name 2)	up to 10
Channel (enquiry channels 10, social 5–6, listening 1)	up to 10
City tier (Tier 0/1 5, Tier 2 3)	up to 5
Disposable e-mail	–10
Another broker, duplicate, no usable contact	reject / merge

Bands: **hot ≥ 65**, **warm ≥ 35**, **nurture ≥ 10**, below that cold. The weights are starting points; re-fit them against closed deals after the first 90 days. Every reason is written into the OS note so a person can see why a lead was routed.

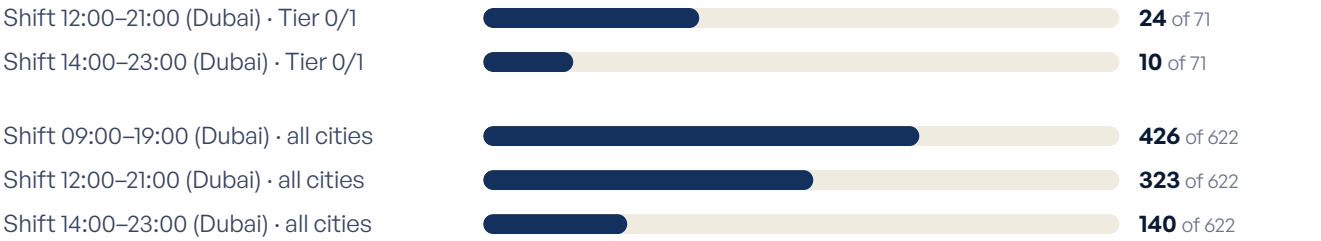

Routing

Situation	Destination
Did not enquire, no consent	Signal queue: public reply by a person; no CRM lead
Cold or nurture	Opted-in WhatsApp/e-mail nurture, BDM owns
Budget ≥ AED 5,000,000	BDM, 5-minute SLA, Manager informed
Hot, agent on shift, under 15 active leads	Agent, 5-minute SLA
Warm, agent under 70% capacity	Agent, 30-minute SLA
Agent off shift, at capacity or no seat	BDM triages

The one-agent time-zone problem

People enquire in their local evening (taken as 19:00–22:00). Cities with **no overlap** between that window and the agent's shift on 26 October 2026:

Shift 09:00–19:00 (Dubai) · Tier 0/1 **47** of 71

Recommendation

Set the Agent's shift to **14:00–23:00 Dubai time** and have the BDM cover mornings. Daylight-saving changes move Europe and North America by an hour. The engine reads `AGENT_SHIFT`, so changing it is a one-line edit.

09 Access: five seats

Owner, Manager, BDM, IT Admin and **one** Agent. The code rejects a second agent, any other role, and one person in two seats.

Action	Owner	Manager	BDM	IT Admin	Agent

SWK OS roles

Growth	SWK OS role	Permissions
Owner	Admin	Use the existing system Admin role. Only the Owner creates API keys and changes roles.
Manager	Manager	Use the existing system Manager role (all modules).
BDM	Growth BDM	dashboard: view; crm: view/create/edit; sales: view/create/edit; reports: view; projects: view/create/edit; documents: view; masters: view
IT Admin	Growth IT	dashboard: view; admin: view; masters: view
Agent	Growth Agent	dashboard: view; crm: view/create/edit; documents: view; masters: view
(service)	Growth Sync	crm: view/create/edit

Verified on a local SWK OS

Role	List leads	Export	Delete	Create API key	List users
Growth Agent	200	403	403	403	403
Growth IT	**403**	403	403	403	200
Growth BDM	200	403	403	403	403
Growth Sync (key)	200	403	403	403	403

Known gaps in SWK OS

No row-level scoping: the Agent can list all leads. **API-key escalation:** write access on *admin* lets a role mint a key that acts as Admin (reproduced). **Published default credentials** in the OS README and example environment; confirm they were changed on production. Change requests are listed in the next section.

10 SWK OS integration

Checked against a running local copy of the SWK OS repository, not only its source. Not yet run against production.

Growth field	OS lead field	Rule
Name	company, contact_name	company is required in OS
Phone / e-mail	phone, email	E.164 phone
Channel	source	WhatsApp, LinkedIn, Website, Portal enquiry, Property Finder, Bayut, Dubizzle, Referral, Exhibition / event, Email campaign, Inbound call; social channels → Other
Consent	marketing_consent	"Opted in" only with captured consent, else Unknown
City, country	origin	e.g. "Kochi, IN"
Budget	est_value	AED
Route	owner_id	Agent or BDM user id
Everything else	notes	[SWKGrowth] block: gid, channel, city, score and reasons, SLA, consent evidence, UTM

A bug found only by testing against the real system

OS search (`q`) covers lead number, company and contact name only. The first version looked up duplicates with it, found nothing, and created a second CRM record for a repeat lead. The client now uses OS filters (`filters=[{field,op,value}]`) on phone, e-mail and the `gid` in the note; the repeat enquiry is merged and a note added.

Change requests for the OS repository (not applied)

1. Add social sources (Instagram, Facebook, TikTok, YouTube, X, Telegram, Snapchat, Google Business) to `LEAD_SOURCES`.
2. Add city, country, channel, UTM, score and consent-evidence fields to `leads` so they can be filtered and reported.
3. Add owner-level row scoping for staff roles.
4. Split *admin* so integrations and key creation are separate from role management.
5. Refuse API-key creation for a user with more privilege than the creator.

11 Compliance

Where the lead is	Check	Practical rule
UAE	PDPL (Decree-Law 45 of 2021); telecom marketing rules; RERA/DLD advertising rules	Consent or enquiry before contact; evidence stored; permit number and QR on property ads

Where the lead is	Check	Practical rule
United Kingdom, EU/EEA	UK GDPR, PECR; GDPR, ePrivacy	Explicit opt-in; data-subject rights; transfer basis for UAE storage
India	DPDP Act 2023; commercial-communication rules	Plain-language consent notice; check DND rules before calls
Saudi Arabia	PDPL	Consent and transfer rules
China (mainland)	PIPL	Separate consent; operate through an authorised local partner
USA / Canada	TCPA, state laws; CASL, CAN-SPAM	Written consent for texts and calls
Russia	Sanctions, data-localisation	Screen for sanctions before any transaction; take advice before storing residents' data

Working notes, not legal advice. Counsel must confirm every row before launch and whenever a market is added. Sanctions and AML/DNFBP screening happen in SWK OS before any transaction, whatever the lead source.

Enforced in code

- Consent gate: nobody who did not enquire or consent becomes a CRM lead.
- Consent is never inferred; OS shows “Unknown” unless evidence exists.
- Intake endpoints verify an HMAC signature, cap body size, rate-limit.
- The ledger stores only hashed dedupe keys and OS ids, with owner-only file permissions.
- Public-post signals keep a 280-character excerpt and are purged after 30 days unless converted.

12 Measurement

Everything below must be measured; no conversion rate is assumed in this report. Review weekly by city, channel and pillar.

Stage	Weeks 1–4	Weeks 5–8	Weeks 9–12
Posts published			
Enquiries + opt-ins			
Qualified			
Viewings			
Offers			
Deals			
Revenue per city (AED)			

Decision rule at every 4-week review: scale a city or pillar that beats the median on qualified leads per hour of effort; hold one near the median; stop one below the floor for two reviews in a row. Fix the

numeric thresholds after the first month from the baseline, and write each threshold and date down before the test starts.

13 Roadmap

Weeks	Deliverables
Before launch	Legal review of consent text and jurisdictions · claims register · permit workflow · OS roles and Growth Sync key created by the Owner · engine dry run on a sample export
1–4 · Wave 1	Tier 0/1 briefs and 12 pillars in the top five languages · WhatsApp click-to-chat everywhere · Tier 1 landing pages · first instant form · listening queries live · SLA view in OS
5–8 · Wave 2	South Asia, GCC, Levant, North Africa, Turkey clusters · regional-language reels · webinar series · portal import · referral programme
9–12 · Wave 3	Europe, CIS, Africa clusters · investor-grade guides · first 90-day re-ranking of tiers
13–16 · Wave 4	Asia-Pacific, Americas, Oceania · automated weekly report · paid amplification only for proven city/pillar pairs

14 Risks

Risk	Mitigation
Platform account or ad-account suspension	No scraping; official APIs only; backup admins
Consent or data-protection breach	Consent gate, stored evidence, legal review per jurisdiction, 30-day signal purge
Misleading property or return claims	Claims register; no return promises; permit on every ad
One agent overwhelmed or absent	Capacity cap, BDM fallback, shift aligned to enquiry hours, opted-in nurture
Thin or duplicated city content	Uniqueness rule, human review, cluster approach
API key misuse in SWK OS	Owner-only creation, low-privilege service user, 90-day rotation
Sanctions or source-of-funds exposure	AML/sanctions screening in OS before any transaction

15 Decisions and next actions

#	Action	Who
1	Confirm the Agent's shift (recommended 14:00–23:00 Dubai time)	Owner
2	Counsel review of consent wording and the jurisdiction table	Owner / counsel
3	Create roles Growth BDM, Growth IT, Growth Agent, Growth Sync and the service user in SWK OS; mint the Growth Sync key	Owner
4	Check production OS for default passwords and review existing roles for *admin* write access	Owner + IT
5	Approve the OS change requests (social sources, attribution fields, row scoping, admin split)	Owner
6	Build the claims register and the permit workflow	Manager
7	Dry-run the engine on one real export; send ten leads; verify in OS	BDM + IT
8	Register Meta and OS webhooks behind HTTPS	IT
9	Name language reviewers for the top five languages	BDM
10	Keep this repository private	IT
